

The National Power and Electricity Summit - Wednesday, 29of January 2014, Croke Park, Dublin

The summit will bring together energy & electricity leaders, managers and stakeholders to discuss and debate the challenges and opportunities facing this dynamic sector. It will also provide a premium networking platform for agencies, utility operators, engineering contractors, technology and equipment vendors, consultants and others to share knowledge and exchange ideas to support power developments in Ireland.

The conference agenda focuses on the key strategic, environmental, technological, financial and risk related issues that are top of mind for power executives and will provide delegates with practical insights, tools and strategies to manage industry-related issues.

Power & Electricity 2014 will include three streams, namely, Smart Electricity, Renewable Energy and Oil & Gas, as well as morning and afternoon plenary sessions.

Topics we'll be addressing at the summit include:

- Flexibility and adaptability
- The new hallmarks for power generation
- Energy conservation & efficiency;
- Intelligent networks & meters
- Electricity superhighways
- Electricity supply
- Information intelligence & the smart grid
- Smart metering & data protection
- Energy storage
- Commercial potential for oil
- Finance & investment
- The challenging face of energy consumerism
- Future business for utilities
- Trends in gas turbine technology
- Emerging issues in wind energy
- Wind-to-grid connections
- The role of gas & oil
- Wave and tidal
- Super turbine technology
- Exploratory advancements for oil & gas
- Environmental strategy & compliance technologies

Who should attend?
